

THE YARD

The yard centers around the idea of having the site as an enhanced open space for the community to use. The central feature of the site is an open lawn. The open lawn provides a multi-use area for a variety of activities to take place. Encircling the lawn are paths that are configured to create a small loop. The path provides circulation within the site and creates a diagonal connection through the site from the neighborhood to the existing sidewalk along Casement.

Another function of this space is to serve as a resting place along the route between Linear Trail and Northeast Community Park. Benches were added along the paths to provide places to rest and to watch events occurring in the central lawn. Landscaped areas are provided along the paths to enhance the experience when walking through the site. The intent of this design was to give this space the feeling of a back yard that the whole community is free to use.

Features

- Central lawn space
- Small walking loop
- Benches
- Ornamental planting
